REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the presently claimed bicyclic peptides compounds of formula (I) were not found to be reasonably taught or suggested in an updated search of the prior art of record.

The findings of the International Authority in the search report of related PCT/GB2004/003150, as noted in the previous action, are also noted (citing seven "A" references):

Novelty and Inventive Step (Article 33(2)(3) PCT)

The present application addresses bicyclic peptides having the amino acid sequence KCRGDCFC being substituted at the C-terminus with a PEGylated moiety, at the ϵ -amino group with an antineoplastic agent, a chelating agent or a reporter group bound via a linker molecule of the PEG-type. The C-terminal cysteine sulfur is bound as thioether via a methylene carbonyl group to the N-terminus. The other cysteines are bridged via a S-(CH₂)_{1,4}-S link. These compounds are also claimed as being used in radiopharmaceutical compositions, a method for in vivo diagnosis. A method of preparation is claimed too.

D1, which considered representing the closest prior art, discloses compounds which differ only in the lack of the methylene groups between the sulfur atoms of the Cys-Cys bridge. The other prior art documents are more remote concerning the amino acid sequence as well as the nature of the bridges forming the cyclic peptides.

The subject-matter of present claims 1-14 is therefore novel.

Taking the disclosure of D1 into consideration, the problem underlying the present application is to be regarded as to provide further alternative bicyclic peptides which can act as targeting compounds in diagnosis and therapy of diseases related to VEGF, i.e. to neovascularisation, thereby being chemically robust against attacks to the bicyclic structure which stabilizes the particular conformation (see also pages 5 to 6 of D1).

The solution presented by the present application is the introduction of a methylene group linking the Cys sulfurs. This solution is not suggested by the closest prior art alone or in combination with any of the prior art documents D2 to D7. D3 discusses the influence of the ring size upon the activity of backbone cyclised radiolabelled somatostatin analogues but mentions explicitly that bridges involving side chains of the amino acids should be avoided in order to prevent negative effects on the ligand binding to the receptor. The teaching of this document leads the skilled person away from the proposed solution. The other documents do not even deal with the problem of the stability of conformationally constrained bicyclic peptides. The subject-matter of present claims 14 is thus considered involving an inventive step.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Claims 1-8 and 10-14 are allowed.
